DebiCheck

Introduction

DebiCheck (a PASA initiative) is a new secure system that allows customers to electronically authenticate debit orders before their account is debited, giving peace of mind to the customer. DebiCheck protects customers from debit orders being processed without their permission and allows them to confirm the transaction details.

The Merchant can also feel secure that the debit order and customer banking details are correct, and the customer cannot unfairly dispute their valid debit orders. This results in Merchants having better control over their cash flow and also ensures debit orders are processed in a compliant manner.

It will be compulsory for all South African businesses to use DebiCheck to manage debit orders as of October 2021.

TT3 Capabilities

Thumbzup offers the TT3 capability, which enhances and supplements your existing TT1 and TT2 capabilities with real-time card authenticated debit orders.
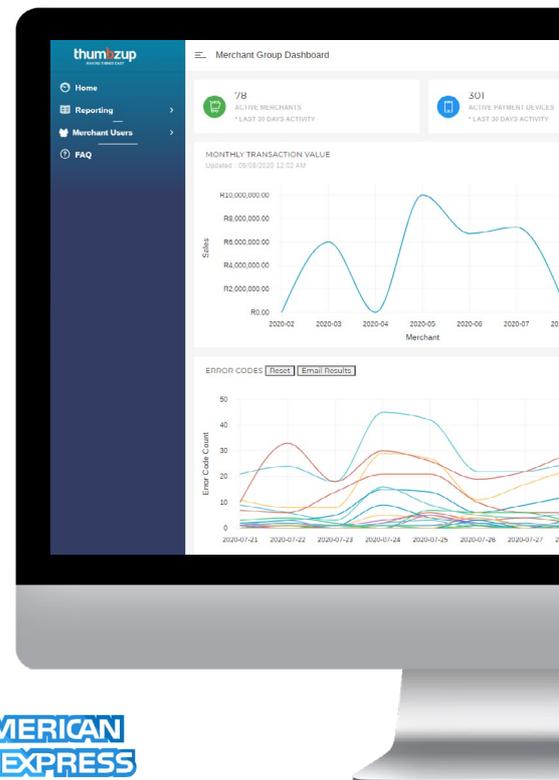

Our DebiCheck TT3 Solution is available across our entire range of mobile devices. Our solutions are multi-functional business tools: conduct retail transactions, sell VAS, conduct enterprise mobility tasks and perform debit order authentication all on one platform.

One of the key benefits of the TT3 capability with Thumbzup is the mitigation of dependencies and delays associated with TT1 and TT2 transaction types, such as SMS and ATM-based approvals.

Integration and Data Management

Thumbzup offers you a fully functional API, allowing for seamless integration with your existing DebiCheck solution through our extensive API's.

Access to our Retail and Merchant Portals will allow you to view and manage your transactional data. The Mobile Device Management (MDM) features offer control and monitoring of the entire estate.
